

Ciudad Games

The Best Source for Entertainment

In the late 2000's, flash websites such as Newgrounds and Kongregate were a tool for young kids to learn more about Mathematics and English through playing video games. Flash games became an inspiration for many teenagers and software engineers today to start learning programming as a hobby.

In 2020, Adobe dropped support for its Flash Player, and with it also all of the educational video games that were written through this platform. In 2021, Chrome and Firefox dropped support for Adobe Flash Player entirely.

While some developers have attempted to port the games over to HTML5, none have been successful to replicate the former glory of having an entire library of games playable from your browser.

In the age of young kids mulling hours over Tiktok and YouTube, there is an urgent need for an educational alternative that can also catch the interest of young kids.

Ciudad Games seeks to heed that call, to be a bastion of hope for video games as an educational tool for the younger generation. To revive what has been lost, to restore what made the early Internet fun for all ages.
